Profile

Lead Product Designer with 4+ years of experience designing and shipping 0-to-1 digital products across fintech, mobility, media, and enterprise software. Led end-to-end product design for platforms serving 40,000+ users across Africa, driving user adoption through research-led decision making and cross-platform design systems. Experienced collaborating with executives, product managers, and engineers to turn complex business challenges into intuitive customer experiences across web, mobile, and desktop platforms.

Employment

Sep 2022 - Present

Lagos, Nigeria

Waystream Global | Product Designer | Full-Time

Africa's first live audio streaming & podcasting platform · Mobile · Web · Desktop

- Owned end-to-end product design for a 0-to-1 platform now serving 40,000+ users and millions of listeners across Africa, from initial research and information architecture through to shipped UI across three platforms.
- Designed a broadcaster setup flow that reduced time-to-live from a 6-step configuration process to a 2-step experience, enabling a church admin to go live mid-service in under 60 seconds from any device.
- Solved a critical mid-broadcast problem by designing a persistent live share button, allowing broadcasters to grow their audience in real time without interrupting or leaving their active stream.
- Designed live chat, event scheduling, donation tools, and local payment integration, removing foreign payment barriers that had previously blocked African creators from accessing premium features on global platforms.
- Built and maintained a cross-platform design system used consistently across iOS, Android, web, and desktop broadcaster app, reducing design-to-dev friction and ensuring visual consistency at scale.

- Collaborated with a cross-functional team of engineers, product managers, and stakeholders to ship a product that competes directly with Spotify, YouTube, and Mixlr in the African market.

Oct 2023 - Jan 2024

Remote

Zyonel Technologies | Lead Product Designer | Full-Time

Client project: Drive45 Mobility, Nigeria's first digital rent-to-own vehicle subscription platform · Web App · Shipped & Live

- Replaced a fully manual paper-based process with a single digital system, reducing application processing time and eliminating operational bottlenecks across the subscriber lifecycle.
- Designed for 5 distinct user types simultaneously: Subscriber, Application Officer, Fleet Supervisor, Admin, and Investor, each with purpose-built dashboards tailored to their specific workflows and mental models.
- Reduced subscriber onboarding friction by introducing an income-based pre-qualification flow that surfaced eligible vehicles before commitment, cutting mismatched expectations and drop-off at the offer stage.
- Designed a due diligence explanation screen that significantly reduced abandonment at the payment step, giving subscribers full clarity on what they were paying for and what happened next.
- Collaborated with developers and stakeholders to design and ship a platform that handles the complete vehicle ownership lifecycle: application, verification, offer signing, payment tracking, and ownership transfer.

Mar 2023 - Jul 2023

Remote

EGFM | Product Designer

Nonprofit inventory & facility management system · Web App · Internal Tool · Shipped

- Eliminated all paper-based facility requests across the organisation, giving managers real-time visibility into inventory and requests for the first time.
- Designed for 3 user types: Facility Managers, Internal Staff Requesters, and Members of the Public, creating the organisation's first-ever public-facing digital request channel.
- Solved a critical duplicate request problem by designing an immediate in-app confirmation screen with a reference number and expected response time, eliminating ambiguity that caused staff to submit the same request multiple times.

- Applied progressive disclosure principles across all 6 modules to ensure usability for non-technical staff, using plain language, self-explanatory actions, and error states that guide users back on track without jargon.
-

Skills

Design

UX Research · User Interviews · Experimentation · Service Design · Usability Testing · Growth Design · Product Strategy · Prototyping · Interaction Design · Accessibility · Information Architecture · Design Systems · AI Product Design
